Movement Quest Submission Guide

For Afeef and Samad | Updated October 24, 2026

Use the latest running project

The APK has reportedly run on two devices. Keep that working project as the code source. These updated documents do not replace your code or prove that the current APK matches the earlier ZIP.

GitHub

Commit current lib/, tests, Android platform source, pubspec.yaml, pubspec.lock and build scripts. Include docs/design/, README, architecture, helper explanation, AI usage log and real test evidence. Put Kanban_Contribution_Evidence.pdf at the repository root. Keep signatures and private credentials out of a public repository.

iCollege before recording

Upload CODING_MASTER_Project1_SelectedQuestions.docx. It contains ten questions, two per category, including I1, I2, D1, D2 and R4. The document has no answers. Rehearse both members' explanations using the PowerPoint notes.

Recording and final package

Record one 20-25 minute team video. Include the working app, code explanations, all selected questions and each member's actual task-to-code/test trace. Verify playback and place the URL in YouTube_Video_Link.txt. Each member uploads the complete team ZIP from their own iCollege account by October 28, 11:59 PM Eastern.

Files that still require real inputs

The signed official acknowledgment, approval evidence, exact tested app-release.apk, final video URL, updated source/test logs, device details, board snapshots, personal reflections and contribution links remain outstanding. Submitted_Proposal.docx is preserved under its truthful name; rename only after confirming actual approval.

Keep the claims accurate

Screenshots establish visible states. A run report establishes reported operation. Native offline/restart checks require real testing. Updated documents preserve these distinctions and must not be relabeled as a fully verified final package until the missing inputs are resolved.
